# **1. MISSION, VISION, & STRATEGIC PRIORITIES**

# **2. INTRODUCTION**

The Washington Suburban Sanitary Commission (WSSC Water) provides water and sewer services to over 1.9 million residents of Maryland's Montgomery and Prince George's Counties, which border Washington, D.C. Established by the Maryland General Assembly in 1918 as a regional (bi-county) organization under Article 29 and later recodified into Division II of the Public Utilities Article of the Annotated Code of Maryland, WSSC Water ranks among the largest water and sewer utilities in the country encompassing a service area of nearly 1,000 square miles.

To fulfill its primary mission of providing safe and reliable water and returning clean water to the environment, WSSC Water operates and maintains an extensive array of highly automated facilities. The organization's two water filtration plants, drawing raw water from the Potomac and Patuxent rivers, are projected to produce an average of 163 million gallons of water per day in FY 2023 and deliver that water through a system of approximately 5,800 miles of water mains to homes and businesses in Montgomery and Prince George's Counties, serving over 475,000 customer accounts.

WSSC Water is committed to protecting the natural environment of Prince George's and Montgomery Counties as it carries out its mandate to provide sanitary sewer and drinking water services. This commitment is reflected in the organization's core value, environmental stewardship, which serves to guide and incorporate behavior and decision making into the organization's investments into green buildings, pollution prevention and control, renewable energy, water quality, and climate change adaptation. WSSC Water's commitment to sustainability is reflected in our energy management program; in our Green House Gas reduction program; and local educational activities. Examples include:

- Adopted and implementing a Greenhouse Gas (GHG) emission reduction plan (details below).
- Design and construction of the Piscataway Bio-Energy Plant which will recover approximately 3 megawatts (MW) of renewable energy from wastewater biomass; reduce geenhouse gas production by 11,800 tons/year; reduce biosolids output by 50 55% of current output; reduce lime demand by 4,100 tons/year; maintain permitted nutrient load limits to the Chesapeake Bay; reduce 5 million gallons/year of grease discharge to sewers; and produce pathogen-free Class A Biosolids;
- Awarded a new, long-term wind contract in 2020. As a result, WSSC Water will receive 33
  percent of its energy directly from wind power and own the associated Renewable Energy
  Credits (RECs);
- Maintain 6 MW of solar photovoltaic power at two water resource recovery facilities and one off-site facility. In addition WSSC Water purchased solar power over a 20-year period at a fixed unit price. Standard Solar was recently awarded a contract to design/build/own/operate an additional 10 MW wholesale solar site in Western Maryland. WSSC Water will own 100% of the carbon offsets from the power generated plus RECs beginning in year 4 of operation. Plant projected to be completed in late 2024;
- Operate three 700-horsepower pump turbines at WSSC Water's Rocky Gorge Water Pumping Station. Our Brighton Dam facility also operates two 250-horsepower hydro turbine generators, with a production capacity of 1,800,000 kilowatt-hours (kWh) of electricity annually;
- Retrofitted Water Resource Recovery Facilities with energy-saving measures that saves the amount of electricity used by 1,186 homes in one year and saves our rate payers \$900,000 per year.
- Conduct, annually, free environmental education programming for more than 2,500 schoolaged children. Through partnerships with local school districts and environmental non-profit organizations, WSSC Water staff have assisted with the professional development of over 200

educators. These educators learn about issues facing local waterways, the importance of source water protection, and how to bring these topics into their classrooms

- Adoption of DocuSign, ePermitting, and and ebill programs save over 250 trees a year and has saved over 2,125,500 sheets of paper last year;
- Recycled over 495 tons of metal equivalent to 66 school buses;
- Return 180+ million gallons of clean water to local waterways each day that supports the health of the Chesapeake Bay watershed.
- Maintain an Environmental Programs Section (EPS) in the Engineerng and Construction Department that acts as the lead resource in WSSC Water for identifying environmental impacts associated with underground utility construction and maintenance activities. Environmental Assessments are routinely conducted for water quality issues (sediment and erosion control), urban forestry, forest conservation, contamination screenings, and impacts to environmentally sensitive areas.
- On average per year, the EPS conducts 2,000 erosion and sediment control inspections on underground utility construction sites, issuance of 300 erosion and sediment control plan approvals and permits, issuance of 350 roadside tree permit authorizations for tree removals and replanting, and 100 hazardous conditions screenings for possible site contamination issues for water systems extension projects.
- In 2022, the EPS had the following achievements:
  - Installed equipment and obtained permits to allow biosolids land application at the Western Branch Resource Recovery Facility (WRRF) that previously used landfill disposal, saving approximately \$5 million per year, and providing a back-up disposal option when the future Piscataway BioEnergy facility is off-line.
  - Optimized the filter backwash practice at the Potomac Water Filtration Plant, saving an estimated \$500,000 per year in energy and chemical costs, and reducing the amount of wastewater for treatment.
  - Participated in a stream restoration project funded jointly by WSC Water, Howard County government, and the Soil Conservation District to reduce nutrient and sediment load to the Patuxent reservoir system.
- WSSC Water has established The Office of Innovation and Research (OIR) that is focused on finding new technologies and processes primarily to support our clean water mission by identifying innovative strategies to improve sustainability, reduce operating expenses, increase safe work practices, and identify, evaluate and pursue revenue opportunities created from innovative ideas. The OIR currently has several sustainability initiatives including:
  - Improved processes to enhance nutrient removal (nitrogen and phosphorous) through ammonia-based aeration controls at three Water Resource Recovery Facilities (WRRF);
  - Installation of technologies to reduce chemical use at an additional three WRRFs;
  - Researching leak detection strategies to identify and mitigate water main pressure transients to reduce water main breaks and related loss of water and system disruptions.

#### **Responding to the Impact of Climate Change**

Starting in 2016, WSSC Water undertook an ambitious approach to responding to the threat of climate change and the unique challenges it will present to water and wastewater utilities by initiating a multiyear Climate Change Vulnerability Assessment, Adaption, and Mitigation Planning (CCVAAMP) Project. The CCVAAMP project included a climate analysis and projections, a vulnerability assessment of WSSC Water facilities and resources, an adaptation analysis, and mitigation planning.

With 49 facilities located in or near floodplains, WSSC Water has several current and future challenges associated with climate change. To address this a "Design Guide for Protecting Facilities from Future Climate Extremes" has been drafted and eighteen facility assessments have been completed. At these 18 facilities, the assessments indicated that eight were at risk of flooding now or in the future. We are in the process of developing plans to implement adaptation strategies for each of these eight facilities.

WSSC Water has developed inventories of annual GHG emissions for all Commission operations for the calendar years (CY) 2005 through 2021. The inventories quantify the GHG emissions that result from the energy-intensive processes required to treat and distribute potable water for public use and to collect and treat wastewater before discharge. Accounting protocols published by The Climate Registry (TCR) General Reporting Protocol (GRP) Version 2.1 in 2016 are used to complete the inventory. Based on the inventory results, a 40-year plan of action was developed with strategies to reduce future GHG emissions at WSSC Water by 10 percent every 5 years through the year 2050 (80% reduction by 2050), using demonstrated technologies and practices available at the present time.

The GHG inventory results and the future emissions projections were used to develop strategies to reduce the GHG emissions and meet the reduction goal. The following are the main focus areas of the GHG reduction strategies:

- 1. Optimizing the efficiency of the water distribution system
- 2. Improving equipment efficiency for water and wastewater
- 3. Reducing residuals and optimizing processes
- 4. Reducing GHGs associated with vehicles and transportation
- 5. Optimizing building services (lighting/heating, ventilating, and air conditioning [HVAC])
- 6. Implementing renewable energy

# **3. FRAMEWORK**

In support of the Green Bonds to be issued by WSSC Water, a framework has been created that follows the four pillars of the Green Bond Principles ("GBP"):

- Use of Proceeds;
- Evaluation and Selection Process;
- Management of Proceeds; and
- Reporting.

### 3.1 Use of Proceeds

To be eligible for the Green Bond proceeds, the projects to be funded must meet criteria in one or more of the following areas:

- 1. Green buildings;
- 2. Pollution prevention and control;
- 3. Renewable energy;
- 4. Water quality; and/or
- 5. Climate change adaptation.

**The context:** Working to protect clean water, WSSC Water in 2005 joined then U.S. Representative Chris Van Hollen, Lieutenant Governor Michael S. Steele and representatives from the Anacostia Watershed Society, Natural Resources Defense Council Audubon Naturalist Society, and Friends of Sligo Creek to announce agreement on a multiyear action plan to dramatically minimize sanitary sewerage overflows. A sanitary sewer overflow (SSO) is an event where untreated or partially treated wastewater discharge from a sanitary sewer system into the surrounding areas.

Working closely with its partners at the federal, state and local levels, WSSC Water developed a proactive, comprehensive plan that augments existing efforts to maintain, identify and rehabilitate problem areas within its 5,500-mile sewer system. Investment actions by the organization will enhance its ability to meet the public health needs of our customers and protect the environment.

In 2003, WSSC Water also implemented an Energy Performance Program that provides for the planning, design and construction of projects to replace and upgrade energy consuming equipment and systems at all its facilities. The program's objective is to reduce energy consumption and energy-related costs (electricity, fuel oil, natural gas, or other fuel), as well as WSSC Water's overall carbon footprint.

**Use of proceeds:** WSSC Water has identified candidate projects aimed at making its infrastructure more green. The projects involve one or more of the following activities:

#### Green buildings/facilities

- Installation of high-efficiency heating, ventilating and air conditioning units;
- Installation of high-efficiency light emitting diode (LED) lighting fixtures;
- Use of cool roof materials; and
- Installation of high-efficiency water and wastewater processing equipment, pumps, motors, and valves.

#### Pollution prevention and control

- Lead clean-up and removal;
- Protection of environmentally sensitive areas from sewer overflow;
- Construction of new sewer, storm drain and recycled water supply systems;
- Sewer system rehabilitation to prevent overflow in waterways;
- Sewer line blockage assessments; and
- Enhanced nutrient removal (nitrogen and phosphorus) and discharge processes to protect waterways.

#### Renewable energy

• Installation of new equipment and systems to produce bio-gas and electricity.

#### Water quality

- Sewer and water line reconstruction for cleaner drinking water;
- Leak detection technologies;
- Advanced mixing systems;
- Installation of technologies to reduce chemical use; and
- Construction of intake channel to reduce drinking water contamination and treatment.

#### Climate change adaptation

- Address safety standards including the Probable Maximum Flood criteria and maximum credible earthquake loadings;
- Install enhanced power reliability equipment at water resource recovery facilities and wastewater pumping stations to prevent sanitary sewer overflows; and
- Reduce biosolids production to enhance health of Chesapeake Bay and reduce greenhouse gas emissions and other air pollutants.

Projects focused on the activities above are eligible to be funded in whole or in part by an allocation of the Green Bond proceeds. WSSC Water has selected the projects listed in Appendix A for the allocation of proceeds of its fourth issue of Green Bonds since 2019.

### 3.2 Project Evaluation and Selection Process

WSSC Water has a rigorous and comprehensive process for the planning and programming of capital projects. Projects financed or refinanced through the Green Bond proceeds are evaluated and selected through the capital improvements program (CIP) project development and approval process based on (i) alignment with the 30- year asset management plan (need identification and validation); (ii) business case studies, as appropriate (technical analysis of options and preferred solution recommendation); and (iii) a thorough vetting process for review and final approval.

### OVERVIEW OF WSSC WATER'S PROJECT NEEDS VALIDATION PROCESS

Genesis and Validation	Business Case Development	Review and Approval							
Asset Management Plans	Technical Analysis and Documentation	WSSC Water CIP							
Establishment of Need	Coordination	Project Prioritization							
Need Validation	Community Outreach	Public Comment							
• Funding	Project Validation	County Governments							
	Solution Recommendation								
Implementation									

WSSC Water advocates and supports conduct for environmental management that will:

- 1. Ensure this environmental policy is communicated to WSSC Water staff, its customers, and the community;
- 2. Ensure compliance with all applicable environmental laws and regulations;
- 3. Ensure environmental considerations include feasible and cost-effective options for exceeding applicable regulatory requirements;
- 4. Define and establish environmental objectives, targets, and best management practices and monitor performance;

- 5. Ensure WSSC Water maintains a Customer Outreach Program to address common environmental issues; and
- 6. Fulfill the responsibilities of each generation as trustee of the environment for succeeding generations through environmental awareness and communication with employees, customers, regulatory agencies, and neighboring communities.

WSSC Water is committed to the spirit and intent of this evaluation and selection process, as well as to the established project development and approval process.

All projects financed with Green Bond proceeds are selected based on their adherence to the conduct stated as part of WSSC Water's environmental management and all applicable laws, rules and regulations. In addition, all selected projects have been reviewed against WSSC Water's Environment Statement (Appendix E) and a stakeholder consultation process.

### **3.3 Management of Proceeds**

Proceeds from Green Bond issuance will be specifically directed to pay the costs of design, construction, property acquisition, and other related costs necessary for selected projects. Ensuring that the proceeds from a Green Bond issuance are used according to established procedures will be the responsibility of WSSC Water's Chief Financial Officer and Division Manager of Accounting.

WSSC Water's Green Bond proceeds will be held in a segregated account and used exclusively to fund a new project or refinance a portion of a prior bond issuance which funded eligible green projects. Green Bond proceeds may also be used to pay the cost of issuance and underwriter's fees. These costs will be specifically delineated in closing documents.

Any portion of a bond that is refunded would be determined by reviewing the applicable series' bond drawdown statements and identifying proceeds that were drawn down for eligible Green Bond Projects.

In the case of refunding, all the funds will be allocated immediately, as no bond proceeds will be used to initiate new projects.

### 3.4 Reporting

#### **Allocation Reporting**

#### New Projects:

WSSC Water will produce an annual report detailing how the Green Bond proceeds were used to finance the selected projects, a description of the selected projects, and details of the environmental benefits resulting from the project until the full allocation of the proceeds. The management of proceeds will be reviewed each year by a third party in accordance with attestation standards established by the American Institute of Certified Public Accountants. The annual report will include a copy of the final Independent Accountants' Report. The annual report will be posted to the Electronic Municipal Market Access (EMMA) website of the Municipal Securities Rulemaking Board, accessible at www.emma.msrb.org. This report will be posted along with other WSSC Water filings, which will be made on or before the date eight months after the close of the fiscal year.

In the future, Green Bond proceeds will be used to refund prior debt issuance. The annual report following such future issuance will include the relevant details of the selected projects that were financed by the initial issuance. However, WSSC Water does not plan such a refunding at this time.

Impact Reporting

WSSC Water commits to provide reporting on key performance indicators (KPIs) in the annual report and "Sustainability" section of the WSSC Water website until the full allocation of the proceeds.

For an example of this KPI reporting for eligible projects, please see Appendix B.

# **4. SELECTED PROJECTS**

### 4.1 Use of Proceeds

Based on the project criteria and project planning and development articulated above, WSSC Water proposes the following projects to be financed with the proceeds of its second series of Green Bonds in January 2023:

Description: Potomac WFP Consent Decree Program (W-73.33) Anticipated Environmental Outcomes per International Capital Market Association (ICMA) Green Bond Principles: Pollution Prevention/Control KPI: Increase in the percent of river solids removed Estimated Cost: \$15,000,000 Estimated Timeline: February 2023 through February 2024

Description: Large Diameter Water Pipe & Large Valve Rehabilitation Program (W-161.01) Anticipated Environmental Outcomes per International Capital Market Association (ICMA) Green Bond Principles: Sustainable Water Management KPI: Miles of large diameter water mains replaced annually Estimated Cost: \$5,000,000 Estimated Timeline: February 2023 through February 2024

Further detail on these projects can be found on Appendices A, B, and G.

# **APPENDICES**

### Appendix A: Eligible Projects

The following table provides a project description, amount, and indicates the ICMA Green Bond Principles (June 2021) category for each eligible project funded/refunded by the Green Bond. See Appendix F for Project Categories

Project name	Project description	Amount (USD)	Renewable Energy	Energy Efficiency	Pollution prevention /control	Sustainable management of living natural resources	Terrestrial and aquatic biodiversity conservation	Clean transportation	Sustainable water management	Climate change adaptation	Eco-efficient products, production technologies and processes	Green Building
Potomac WFP Consent Decree Program (W-73.33)	The Potomac WFP Consent Decree Program provides for the planning, design, and construction required for the implementation of Short-Term Operational and Long-Term Capital Improvements at the Potomac Water Filtration Plant (WFP) to allow WSSC Water to meet the new discharge limitations identified in the Consent Decree.	\$15,000,000			~							

ICMA Green Bond Principles category definitions can be found on Appendix F.

### Appendix A: Eligible Projects (continued)

Project name	Project description	Amount (USD)	Renewable Energy	Energy Efficiency	Pollution prevention /control	Sustainable management of living	Terrestrial and aquatic biodiversity	Clean transportation	Sustainable water management	Climate change adaptation	Eco-efficient products, production technologies	Green Building
Large Diameter Water Pipe & Large Valve Rehabilitation Program W-161.01)	he purpose of this Program is to plan, inspect, design, and rehabilitate or replace large diameter water transmission mains and large system valves that have reached the end of their useful life. Condition assessment and/or corrosion monitoring is performed on metallic pipelines, including ductile iron, cast iron, and steel, to identify lengths of pipe requiring replacement or rehabilitation and cathodic protection. Rehabilitation or replacement of these mains provides value to the customer by minimizing the risk of failure and ensuring a safe and reliable water supply.	5,000,000							V			

ICMA Green Bond Principles category definitions can be found on Appendix F.

# Appendix B: Project KPI Reporting

Project	Category	KPI	Target Result	Status
			Description	
Potomac WFP Consent Decree Program	Solid Discharge Reduction	Increase in the percent of river solids removed	Beginning no later than August 1, 2019, dewater and remove at least 50% of the river intake solids (dry weight equivalent) in addition to the dry weight equivalent of the annual tons of solids resulting from the addition of the annual tons of solids resulting from	Project is proceeding on schedule. Long- term improvements are currently in design. Short-term improvements are complete. Solids removal has improved from 80% to 86.4%
			improvements.	110111 80% to 86.4%.
Large Diameter Water Pipe & Large Valve Rehabilitation Program	Sustainable Infrastructure	Miles of large diameter water mains replaced annually	Over the 6-year CIP planning period, this program is scheduled to replace 5.8 miles of large diameter water mains (16 inches in diameter or greater) on average per year. For FY 2023, the goal is 5.0 miles. Since FY 2018, WSSC Water has replaced 22.43 miles of large diameter water mains.	Although the Covid-19 pandemic impacted work on the largest diameter pipes, WSSC Water completed 2.99 miles of large diameter pipe work in FY 2022.

### Appendix D: WSSC Water Governance

A six-member commission governs WSSC Water - three members from each County. The Commissioners are appointed to four-year terms by their respective County Executives and confirmed by their County Councils. The Commission's powers and responsibilities are set forth in Division II of the Public Utilities Article of the Annotated Code of Maryland and in any subsequent legislative amendments. The Maryland General Assembly conferred these powers upon the WSSC Water to enable it to fulfill its principal functions:

- To provide for the construction, operation, and maintenance of water supply and sanitary sewerage systems in Montgomery and Prince George's Counties;
- To provide for the construction of water and sewer house connection lines from WSSC Water's mains to abutting property lines;
- To approve the locations of, and issue permits for, utilities installed in public ways; and
- To establish water consumption rates, sewer usage rates, connection charges, front foot benefit charges, and permit fees and, if required, to cause appropriate ad valorem taxes to be levied.

The WSSC Water Strategic Priorities are reviewed and adopted by the Commission, including updates when recommended by management. The Priorities are crucial to not only guiding every decision WSSC Water makes in support of their customers, but in the achievement of their clean water mission.

### Appendix D: WSSC Water Governance (Continued)

#### WSSC Water Commissioners

Fausto R. Bayonet Chair Montgomery County 2015

Regina Y. Speed-Bost Vice-Chair Prince George's County 2022

Howard A. Denis Montgomery County 2016

Lynnette D. Espy-Williams Prince George's County 2022

T. Eloise Foster Montgomery County 2016

Mark J. Smith Prince George's County 2022

Kishia L. Powell General Manager/CE0 2023

Kishia L. Powell is a dynamic force in the global water sector with 24 years of experience in both the public and private sectors across the U.S. and London, England. She joined WSSC Water in January 2023 from DC Water, where she served as the Chief Operating Officer and Executive Vice President, overseeing Shared Services, IT, Engineering, Water, Wastewater, Pumping and Sewer Operations and Customer Care.

During her tenure at DC Water, Powell championed several initiatives, including a focus on operationalizing equity and environmental justice. She provided oversight for DC Water's 10-year \$6.4 billion capital improvement program, including the DC Clean Rivers program, improvements to Blue Plains, water and sewer system improvements and Lead Free DC, an initiative to replace all lead service lines in the District of Columbia. She was also responsible for leading the implementation of workstreams under the utility's strategic plan imperative for reliability. Most notably, she led the COVID-19 pandemic response and recovery efforts and introduced the campaign to recognize DC Water's frontline team as water heroes.

### Appendix D: WSSC Water Governance (Continued)

Before DC Water, Powell was the City of Atlanta's Commissioner of Watershed Management, overseeing \$644 million in annual operating expenditures and a five-year capital improvement plan of \$1.26 billion. Under her leadership, the Watershed Management team commissioned the Water Supply Program to secure Atlanta's water future. The program reached a significant milestone in April 2020 when water from the Chattahoochee River started filling an old rock quarry repurposed to store 2.4 billion gallons of raw water. Focusing on financial resilience, improved service delivery and infrastructure investment, GM Powell also supported the creation of a workforce development in partnership with the City of Atlanta's Department of Corrections to reduce recidivism by hiring prerelease non-violent offenders as watershed trainees. In 2017, the department earned recognition in the inaugural class of Leading Utilities of the World during the Global Water Summit in Madrid, Spain.

Powell previously served as the City of Jackson, Mississippi's Public Works Director. In this role, she led the development of the required master plan for Jackson's municipal Special Sales Tax-funded infrastructure improvements program, including the "Greening the Gateways" initiative, which led to the City's award of a \$16.5 million TIGER Grant. Her previous experience also includes serving as Bureau Head of Water and Wastewater for the City of Baltimore. In honor of her service, the Chesapeake Water Environment Association recognized her as a Water Hero in the Summer of 2010.

GM Powell has served as Chair of the US Water Alliance's One Water Council (2021-2022) and, since 2016, as a Board Member for the National Association of Clean Water Agencies (NACWA), where she served as President for the 2021-2022 term. As President, upon the recommendation of her Board colleagues, she established NACWA's standing Environmental Justice Committee. Throughout her career, she has received several recognitions and honors for her service to the sector and communities she has served, including being recognized as one of Engineering Georgia magazine's top 100 most influential women. In 2019, she received the WaterNow Alliance's Impact Award for leadership in closing the country's first publicly offered Environmental Impact Bond, and in 2022 she was honored with a Meritorious Service Award by ACEC Metropolitan Washington Chapter.

A licensed Professional Engineer in the State of Maryland, Virginia and the District of Columbia, Powell holds a Bachelor of Science degree in Civil Engineering from Morgan State University's Clarence M. Mitchell, Jr. School of Engineering. She is currently serving on the Dean's Executive Engineering Council and as GSA's Green Building Advisory Committee.

In 2020, she returned to Maryland to be close to her immediate family and the Chesapeake Bay on which she enjoys sailing. Of all that she does, Powell considers being a godmother, aunt, great aunt and dog mom to Lord Louis Leo London Wyndsor as her most important roles.

Throughout her career, she has maintained a strong sense of ethics and distinguished herself as a leader, blending global reach, local knowledge, strategic thinking and technical excellence to deliver sound solutions.

### Appendix E: WSSC Water Environmental Statement

WSSC Water is committed to protecting the natural environment of Prince George's and Montgomery Counties as it carries out its mandate to provide sanitary sewer and drinking water services. This commitment focuses on those unique natural and manmade features (waterways, woodlands, and wetlands, as well as parklands, historical sites, and residential areas) that have been indicated by federal, state, and local environmental protection laws and regulations. Specific impact information is included in the evaluation of alternatives during the organization's Asset Management Process, if the environment features will be affected by the proposed construction of a project. Six primary areas are addressed as appropriate:

- <u>Stream Valleys</u> identify the classification of the stream and, in general terms, the published water quality. From published maps, show the topography including the 100-year floodplain;
- <u>Wetlands (Tidal and Non-tidal)</u> using published maps, show the locations of these and give their classification;
- <u>Woodlands or Forested Areas</u> using aerial photographs or published maps, show the location of these and identify their type;
- <u>Parklands</u> using published maps, show the location of all land holdings of the Maryland-National Capital Park & Planning Commission, the Department of Natural Resources, and the National Park Service;
- Steep Slopes using published maps, show all slopes greater than 15%; and,
- <u>Historical/Archaeological Sites</u> the Maryland Geological Survey (State Archaeologist) and Maryland Historical Trust will provide information on sites near the project alternatives. The Maryland-National Capital Park & Planning Commission or county government may provide additional information of local interest.

### Appendix F: Green Project Categories (ICMA June 2021)

The eligible Green Project categories, listed in no specific order, include, but are not limited to:

- Renewable energy (including production, transmission, appliances and products);
- Energy efficiency (such as in new and refurbished buildings, energy storage, district heating, smart grids, appliances and products);
- **Pollution prevention and control** (including reduction of air emissions, greenhouse gas control, soil remediation, waste prevention, waste reduction, waste recycling and energy/emission-efficient waste to energy);
- Environmentally sustainable management of living natural resources and land use (including environmentally sustainable agriculture; environmentally sustainable animal husbandry; climate smart farm inputs such as biological crop protection or drip-irrigation; environmentally sustainable fishery and aquaculture; environmentally-sustainable forestry, including afforestation or reforestation, and preservation or restoration of natural landscapes);
- **Terrestrial and aquatic biodiversity conservation** (including the protection of coastal, marine and watershed environments);
- Clean transportation (such as electric, hybrid, public, rail, non-motorized, multi-modal transportation, infrastructure for clean energy vehicles and reduction of harmful emissions);
- Sustainable water and wastewater management (including sustainable infrastructure for clean and/or drinking water, wastewater treatment, sustainable urban drainage systems and river training and other forms of flooding mitigation);
- Climate change adaptation (including efforts to make infrastructure more resilient to impacts of climate change, as well as information support systems, such as climate observation and early warning systems);
- Circular economy adapted products, production technologies and processes (such as the design and introduction of reusable, recyclable and refurbished materials, components and products; circular tools and services); and/or certified eco-efficient products.
- **Green buildings** that meet regional, national or internationally recognized standards or certifications for environmental performance.

The Consent De	cree (CD) was E	ntered by the U	S. District (	Court of Ma	ryland on A	pril 15, 20	16. Under t	he terms o	f the CD W	SSC Water	is require	d to	Capacity		
undertake short	-term operationa	I changes and o	apital impro	ovements a	t the Potom	ac WFP th n. design	nat will enal and impler	ble WSSC	Water to re	duce signif des to the e	icantly the existing Pla	pounds	H. Map		
per day of solids discharged to the River" (CD Section II. Paragraph 6.i); and to plan, design, and implement long-term "upgrades to the existing Plant or to design and construct a new plant to achieve the effluent limits, conditions, and waste load allocations established by the Maryland Department of the Environment (the Department) and/or in this Consent Decree, and incorporated in a new discharge permit to be issued by the Department' (CD Section II. Paragraph 6.ii). The CD required WSSC Water to submit a Draft Audit Report and Draft Long-Term Upgrade Plan to the Citizens and the Department by November 15, 2016, and final reports to the Citizens and the Department on December 29, 2016. The Department reviews the Audit Report and selects recommended improvements in operations, monitoring, and waste tracking, along with select capital projects that can be completed no later than April 1, 2020 and that are necessary to achieve the goals identified in CD Section IV. Paragraph 24. Additionally, the work required to implement the Long-Term Capital Improvements Project(s) shall be fully implemented in accordance with the cD for failure to implement the Long-Term Capital Improvement Project(s) by January 1, 2026.											MAD NOT AVAI				
COST CHANGE The expenditure	projections were	e revised based	upon final o	lesign estin	nates.								MAP NOT AVAIL	ADLE	
OTHER															
The project scope has remained the same. The schedule and expenditure projections shown in Block B above are design level estimates and include \$1,000,000 for Supplemental Environmental Projects included under CD Section IX. Paragraph 50. WSSC Water Green Bonds will be utilized to fund a portion of this project. The reduction in suspended solids discharged into the Potomac River will address the following International Capital Market Association (ICMA) Green Bond Principles 2016 categories: Pollution prevention/control; and Terrestrial and aquatic biodiversity conservation.											de nd a

acquisitions and regulatory permits. T	The construct	cted system is	inspecte	d and an a	s-built plan	is produc	ced to serve	as the rene	ewed asset	record.				
In July 2013, WSSC Water's Acoustic Fiber Optic monitoring system identified breaking wires in a 54-inch diameter PCCP water transmission main in the Forestville area of Prince George's County. Upon attempting to close nearby valves to isolate the failing pipe for repair, WSSC Water crews encountered an inoperable valve with a broken gear, requiring the crew to drop back to the next available valve. This dropping-back to another valve would block one of the major water mains serving Prince George's County, significantly enlarging the shutdown area and reduce our capacity to supply water to over 100,000 residents. In order to minimize the risk associated with inoperable large valves and possible water outages, the large valve inspection and repair program was initiated to systematically inspect exercise repair or replace any of the next! 500 large diameter valves and values located throughout the system

# Appendix G: Selected Green Bond Projects – Large Diameter Wipe Pipe and Large Valve Rehabilitation Program (Continued)

Program costs reflect the latest schedule and expenditure estimates based upon the recommendations from the Buried Water Assets System Asset Management Plan.

Due to budgetary constraints, the budget for this project in FY'23 has been reduced by \$18.6 million

#### OTHER

The project scope has remained the same. The schedule and expenditure projections shown in Block B above are order of magnitude estimates and are expected to change based upon the results of the on-going inspections and condition assessments. Additional costs associated with PCCP inspection/condition assessment, large valve inspection/repairs, and emergency repairs are included in the Operating Budget. WSSC Water Green Bonds will be utilized to fund a portion of this project. The annual replacement work for large diameter water mains will address the following International Capital Market Association (ICMA) Green Bond Principles 2016 category: Sustainable water management.

#### COORDINATION

Coordinating Agencies: Local Community Civic Associations: Maryland State Highway Administration: Maryland-National Capital Park & Planning Commission: Montgomery County Department of Public Works and Transportation: Montgomery County Government; (including localities where work is to be performed): Prince George's County Government; (including localities where work is to be performed); Prince George's County Department of Permitting Inspection and Enforcement

Coordinating Projects: W - 000001.00 - Water Reconstruction Program; W - 000107.00 - Specialty Valve Vault Rehabilitation Program
